

SPECIFICATIONS

PRODUCT DESCRIPTION

- SwissGriP® AQUA FLOORLINE
- Dual-component, water-based polyurethane floor coating
- UV-resistant. Outstanding adhesion and resistance.
- Article Code 12KG: S 9810-012.000
- P2, P3, P4 or P5 Slip-Rating

SHEEN: Semi-Gloss

UV-RESISTANT: Yes

APPLICATION: Roller or Sprayer

AREA OF USE

- Concrete interior and exterior floors
- Commercial factories and production halls, commercial kitchens, ramps, stair cases, corridors, walkways, garages, ramps, etc.

SLIP RESISTANCE TO AS 4586-2013

- WET Pendulum Test Method.
Class: P3, P4 and P5

CHEMICAL RESISTANCE

Excellent chemical and mechanical resistance. Hydraulic Oil, Motor Oil, Petrol and Paint Thinner do not impact Aqua Floorline during a three month exposure test. See Technical Data Sheet for full exposure test with additional chemicals.

VOC Level Part A: <0.5 % by weight

VOC Level Part B: 0.0 % by weight

STANDARD COLOURS

Swiss GriP Aqua Floorline is available in 11 standard colours.

Light Grey
RAL7035

SWISSGriPE[®]
NON-SLIP COATINGS

AQUA FLOORLINE

WATER-BASED CONCRETE FLOOR COATING

FOR TODAY AND TOMORROW
Water-based, VOC-Free and UV resistant

SWISSGRIP® FOR TODAY AND TOMORROW.

SwissGriP® are the global leader in certified non-slip coatings, drawing on more than 25 years of experience in development and manufacturing. SwissGriP® Aqua Floorline combines many of our innovations in durability, user-friendliness, safety and the environment.

WATER-BASED, VOC-FREE

All our coating are developed and made in Switzerland. Therefore, it goes without saying that we commit to the highest standards of quality. Moreover, we only develop water-based, VOC-free coatings and our factory is certified in ISO 9001, 14001 and 45001. Our coatings are made for today and tomorrow.

WHERE TO USE

Interior and exterior concrete floors. Corridors, commercial kitchens, production halls, stair cases, walkways, garages, ramps, etc.

SEMI-GLOSS FINISH ...WITHOUT ROLLER MARKS!

SwissGriP® Aqua Floorline has a semi-gloss finish and can meet any safety level of the New Zealand Standard for Slip-Resistance: select our smooth P2 finish or opt for a P3, P4 or P5 slip-rating.

Unlike epoxies, SwissGriP® Aqua Floorline achieves a stunning, consistent finish. Why?

POT-LIFE: SwissGriP® Aqua Floorline has a pot-life of up to four hours. So unlike epoxies, which have a fast, toxic chemical reaction, our coatings are easy and safe to apply.

SWISSGRIP® NON-SLIP PARTICLES:

The SwissGriP® Non-Slip particles are specifically developed to work with SwissGriP® Aqua Floorline. Therefore, it complements our coatings and prevents installers from having to use glass or silica particles.

NO PRIMER REQUIRED

Our innovative system does not require a separate primer. Instead, the first layer of SwissGriP® Aqua Floorline is diluted with 20% to 25% of water. This makes it penetrate deep into the concrete creating an exceptional bond for the second finish coat. A third coat is also possible for extra durability.

SWISSGRiP®
NON-SLIP COATINGS

NON-SLIP OPTION

Unlike many other concrete coatings, SwissGriP® Aqua Floorline was especially developed with a non-slip option. This allows for an easy to apply and stunning non-slip finish. SwissGriP® Non-Slip options: P3 and P4.

WATER-BASED

We care about safety, today and tomorrow. That is why SwissGriP® only develops high quality, water-based, Low-VOC and environmentally friendly coatings.

LONG POT LIFE

SwissGriP® Aqua Floorline has a pot life of up to four hours after mixing the two parts. No stress to apply the coating compared to the short pot life of epoxy coatings.

DURABLE

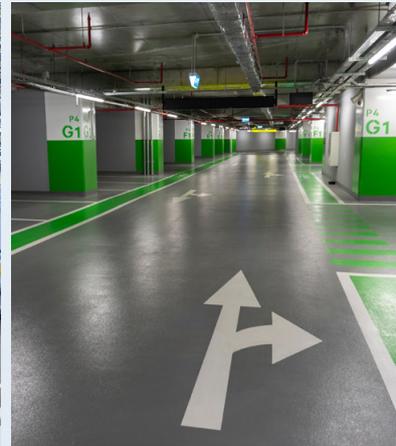

We set the new standard in durable, water-based floor coatings. SwissGriP® Aqua Floorline has excellent chemical and mechanical resistance and therefore excellent durability.

SWISS-MADE

SwissGriP® is developed and made in Switzerland, a country known for its precision and quality. We proudly work the Swiss way, from manufacturing up to installation.

UV-RESISTANT

Our premium quality coatings are UV-resistant, not just UV-stable like many other coatings and epoxies. This means SwissGriP® coatings do not change in colour over time.

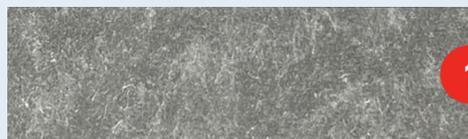

EASY TO USE

SwissGriP® Aqua Floorline is applied in two or three layers without needing paint thinners and solvents.

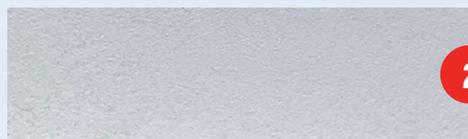

Our low-odour, water-based coating is simply diluted with water. The first coat is diluted with 20-25% of water and acts as a prime layer.

After curing, the finish coat (dilution 0-5%) is applied. The SwissGriP® Non-Slip Particles can be added to this coat.

1

ORIGINAL CONCRETE FLOOR

2

PRIME COAT

Diluted 20-25% with water

3

SECOND COAT (P2 SLIP RATING)

Diluted 0-5% with water

4

FINISH COAT (P4 SLIP RATING)

Diluted 0-5% with water
